

## ADA MODULE

# TITLE 24 COMPLIANT

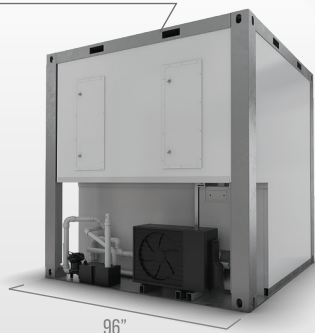

ALUMINUM DOOR HINGES

GALVANIZED-STEEL FRAME

FREE/BUSY INDICATOR LIGHT

WHEELCHAIR ACCESSIBLE

Sanitrax's new ADA Module is a mobile-friendly unit designed for rapid deployment and seamless integration with other Sanitrax modules. Built with the same proven vacuum technology used across the Sanitrax system, it is highly operator-friendly and quick to set up in virtually any location.

The spacious interior is designed to accommodate wheelchairs comfortably, allowing for easy maneuverability without restricting user space. Its fresh-flush system evacuates waste efficiently, helping maintain a clean environment and fresh odor control.

Because the ADA Module connects directly into the Sanitrax system, it eliminates the need for separate plastic ADA restrooms on site when a Sanitrax ADA unit is available in your fleet.

## **ADA UNIT PRICE BREAKDOWN**

Because the USFO business unit runs at a breakeven, USFO solely charges for gear expenses and an overhead allocation that supports salaries, merit, and other necessary expenses.

Currently, we own 6 ADA Units that can either be tied into existing infrastructure (& existing tech units) or stand alone. Any ADA units that are stand alone require a tech unit to tie into. We are in the process of purchasing more ADA units in the hopes of having up to 22 in our inventory by October.

### **Expense Breakdown**

*\*\*if the festival has already agreed to use USFO Vac Toilets, there will be no additional charge for extra labor, travel, or lodging.*

#### **Overhead Allocation:**

- Our per truck fee - \$7,500 per truck
- 1 truck full of ADAs is either 5 or 6 ADA units, depending if supporting tech units and pipe are added, which is dependent on where the ADA units are tied into existing vac areas or not.

#### **Freight:**

- Freight costs vary
- Typically the current festival will pay the inbound freight & a future festival using the same equipment will pay for the out
- Since 6 ADA units is a full truck, if any extra tech units/rovers are needed for stand alone ADA unit installations, another truck will have to be freighted in & out of the festival; or the number of units will be shorted to accommodate the extra outboard gear required. These costs will be on the current festival
- Based on scheduling, current festival may pay for both in & out if there is not a future festival that could take on the outbound freight charges

#### **Supplies:**

- \$350 per festival. Includes any vital parts needed to get the ADAs fully operational on the install

#### **Janitorial:**

- Varies by festival. USFO recommends using Venue Smart for all janitorial needs.
- Premium team/festival can take on janitorial costs by reaching out to Venue Smart or USS directly to clean, otherwise USFO will get quoted by VS and include in the ADA quote
